DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on May 06, 2004 has been entered.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 1-3 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

With respect to claim 1, in line 7, the claimed limitation "combining the excepted symbol data" does not describe or support by the specification. The specification does not disclose combining the excepted symbol data, in other words, combining the symbol data whose sign is inverted due to fading.

Claims 2-3 are rejected as they depend upon rejected independent claim 1.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

Art Unit: 2667

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

3. Claim 1 is rejected under 35 U.S.C. 102(e) as being anticipated by Ito (US Patent No. 6,408,039).

With respect to claim 1, as best understood, Ito discloses in Fig. 1, a rake receiver including a plurality of searcher/finger units 11-16 (a plurality of fingers each for dispreading a signal received in one path and extracting symbol data). Ito discloses in Fig. 2, an architecture of a searcher/finger unit for dispreading a received signal and extracting symbol data. Further, as shown in Fig. 1, a symbol combiner 18 for combining finger symbols outputted by the searcher/finger units 11-16; wherein the finger symbols are compensated for errors which occur during transmissions by the phase equalizer 26 by adjusting the phase of the symbols using the calculated result of the phase calculator 24, as shown in Fig. 2, before being combined by the symbol combiner 18. Herein, as clearly disclosed by Ito, the symbol data has the correct sign before being combined by the symbol combiner. The step of compensation for errors is applied in the searcher/finger units therefore the outputted finger symbols all have the corrected sign (a

Art Unit: 2667

symbol combiner for receiving and combining the symbol data, excepting symbol data, whose signs are inverted due to fading, from the symbol data received from plurality of fingers).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

- (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 4. Claim 3 is rejected under 35 U.S.C. 103(a) as being unpatentable over Ito (US Patent No. 6,408,039).

With respect to claim 3, Ito discloses a radio communication apparatus having a rake receiver for searching and combining reception paths. Ito does not disclose the symbol data is a 2's complement of n bits. However, having a 2's complement of n bits, where n is an arbitrary number, is known in the digital communications in the process of executing and performing an arithmetic operation. It would have been obvious to one having ordinary skill in the art at the time the invention was made to include the feature of having 2's complement of n bits in Ito's system, since 2's complement is well known in the art in executing arithmetic operations.

Allowable Subject Matter

- 5. Claim 2 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
- 6. Claims 4-8 are allowed.

The following is an examiner's statement of reasons for allowance:

Art Unit: 2667

The prior art does not teach or fairly suggest an effective path selector for outputting only symbol data with a sign corresponding to the majority sign among the symbol data received from the energy determiner; wherein only symbol data with an energy higher than a threshold is being applied to the effective path selector, as specified in the independent claims 4, 6, and 7.

The prior art does not teach or fairly suggest outputting symbol data with energy higher than the threshold to an effective path selector and setting symbol data with energy less than the threshold to 0s by the energy determiner; checking the signals of the symbol data received from the energy determiner by the effective path selector; and setting symbol data with a sign different from the majority sign to 0s and outputting symbol data with majority sign to a channel combiner by the effective path selector, as specified in the independent claim 8.

Conclusion

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Anh-Vu H Ly whose telephone number is 703-306-5675. The examiner can normally be reached on Monday-Friday 7:00am - 4:00pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Chi Pham can be reached on 703-305-4378. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
